JULES PEAN, born 1830, died 1898, was the most important French gynecological surgeon of his time. He studied at Paris 1860. 1864 Pean was the first surgeon in Paris to perform an ovariectomy. By the use of Pean pins he introduced forceps pressure for control of hemorrhage, thus he invented the most used surgical instrument, next to the scalpel.

- >> Alle unsere Mikroscheren werden von Fachkräften mit jahrelanger Erfahrung hergestellt. Die Endkontrolle findet unter dem Mikroskop statt. Um Ihnen ein ermüdungsfreies Arbeiten zu ermöglichen, wird dem Federdruck größte Aufmerksamkeit gewidmet.
- >> Bitte wählen Sie unter Rund- oder Flachgriffscheren.

Dissection: Gebogene Blätter, abgerundete Spitzen ermöglichen eine gute und sichere Dissektion, ohne Nerven und Blutgefäße zu beschädigen.

Adventitia: Gerade Blätter, sehr scharfe Spitzen gewährleisten präzises Anfrischen von Gefäßenden.

Nerve: Ein Blatt ist fein gezahnt, um ein Herausgleiten des Nervs zu vermeiden.

- >> All our Micro Scissors are manufactured by skilled craftsmen with many years of experience. Final inspection is carried out under a microscope. Careful attention is paid to the closing pressure of the spring handle, to ensure precise work during surgeries, without fatigue.
- >> Round or flat handle scissors according to your preference.

Dissection: Curved blades, slightly rounded tips ensure safe dissection without damage to nerves and vessels.

Adventitia: Straight blades, very sharp tips for finest trimming of vessel ends.

Nerve: One blade is fine-toothed to avoid slipping of the nerve.

NEW PORT

KB 082/00
25,0 cm/10"

NEU: **Vaginalspekulum für die seitlichen Wände**
Dieser Halter passt in Ihr Cusco Spekulum. Die konkave Form und die abgerundeten Kanten garantieren ein sicheres, gewebeschonendes Zurückhalten der seitlichen Scheidenwände. Dadurch erhalten Sie wesentlich bessere Sicht für alle Ihre gynäkologischen Eingriffe.

NEW: **Lateral Vaginal Retractor**
This retractor was especially designed to fit inside your vaginal speculum. This simultaneous use with a standard speculum like Grave or Pederson will avoid collapse of the vaginal walls. This will give you a much better field of view, which is of utmost importance for all gynecological procedures. The concave shape of the blades and the rounded edges will guarantee a smooth retraction of the tissue.

Beschreibung XU 140/00 - XU 140/03

Der nopaflow 16 l future 200 ermöglicht eine sichere Anlage des Pneumoperitoneums während der diagnostischen und operativen Laparoskopie.

Durch moderne prozessorgesteuerte Druck- und Flowregelung ergibt sich eine hohe Regelgenauigkeit, sowohl bei herkömmlichen als auch bei strömungstechnisch weiterentwickelten Instrumenten. Die Regelschnelligkeit ist optimiert durch den Insufflationsmodus (LPS/RGLC).

Eine hohe Applikationssicherheit ist garantiert durch die extrem schnelle Nachregelung des Druckes bei Druckverlust sowie die konsequente Ausregelung von Leckagen ohne störende Druckschwankungen. Bei Drucküberschreitungen oder Zuleitungsschluss erfolgt ein Warnsignal sowie ein Flowstop. Automatische Anzeige bei Gasmangel.

Neben der automatischen Selbsttest-Routine nach jedem Einschalten verfügt der nopaflow 16 l future 200 über eine automatische Fehlercode-Anzeige.

Beschreibung XU 150/00 - XU 150/03

Der nopaflow 40 I future 200 ermöglicht eine sichere Anlage des Pneumoperitoneums während der diagnostischen und operativen Laparoskopie.

Durch moderne prozessorgesteuerte Druck- und Flowregelung ergibt sich eine hohe Regelgenauigkeit, sowohl bei herkömmlichen als auch bei strömungstechnisch weiterentwickelten Instrumenten. Die Regelschnelligkeit ist optimiert durch den Insufflationsmodus (LPS/RGLC).

Eine hohe Applikationssicherheit ist garantiert durch die extrem schnelle Nachregelung des Druckes bei Druckverlust sowie die konsequente Ausregelung von Leckagen ohne störende Druckschwankungen. Bei Drucküberschreitungen oder Zuleitungsschluss erfolgt ein Warnsignal sowie ein Flowstop. Automatische Anzeige bei Gasmangel.

Neben der automatischen Selbsttest-Routine nach jedem Einschalten verfügt der nopaflow 40 I future 200 über eine automatische Fehlercode-Anzeige.

Description XU 150/00 - XU 150/03

The nopaflow 40 I future 200 ensures a safe introduction of the pneumoperitoneum during diagnostic and operative laparoscopy.

A high-tech processing unit for the pressure and flowcontrol guarantees a high accuracy for all instruments. The regulating speed is optimized by means of the safety technology mode (LPS/RGLC).

High application security is guaranteed by the extremely fast readjustment of pressure after pressure loss and consequent deviation control of pressure leakages without any pressure fluctuation. In case of exceeding pressure of supply clogging a warning signal and a flow-stop will be activated. Automatic display during loss of gas.

Besides automatic self-testing routine after every start, the nopaflow 40 I future 200 is equipped with an automatic error-code display. Maintenance of the system is easy, by means of operational instructions of the program.

Die nopa Reinigungspistole ist das ideale Werkzeug für die Reinigung von Laborgläsern, Pipetten, Spritzen, Kathetern, Küvetten, Endoskopen, Cystoskopen, Kanülen und anderen Gegenständen in Klinik, Labor und Praxis – also überall dort, wo es auf höchste Sauberkeit und Hygiene ankommt.

Die Reinigung erfolgt mit Wasser oder Druckluft besonders schnell, effizient und damit kostensparend.

Bei der neuen nopa Reinigungspistole ist der Wasser- oder Luftstrahl durch eine neuartige Dosiermechanik stufenlos über die gesamte Betätigungsstrecke des Abzughahns fein dosierbar.

Der maximale Wasser- oder Luftfluss kann auch mit der kleinen Rändelschraube hinter dem Abzughahn individuell eingestellt werden.

The nopa Spray Gun is the ideal instrument for cleaning laboratory glassware, pipettes, syringes, catheters, cuvettes, endoscopes, cystoscopes, cannulae and a variety of other instruments and articles used in clinics, laboratories, and medical practices – in other words, everywhere where highest cleanliness and hygiene are mandatory.

The nopa Spray Gun uses either water or pressurized air – this means the cleaning process is quick, efficient and inexpensive.

The nopa Spray Gun features a new type of internal flow control mechanism. It permits the smooth and simple adjustment of the water or air flow across the entire range of the trigger movement.

The desired maximum water or air flow can be set by using the small knurled screw located behind the trigger. It is then regulated via the trigger up to the set maximum value.
